

VC CAKE ACADEMY

ACADEMY & CAKE BOUTIQUE

ADMIN PANEL OPERATIONS MANUAL & USAGE GUIDE

Bilingual Student Course Registrations, Custom Celebration Cake Orders,
Interactive Content Vlogs/Blogs, Landing Page Settings,
and Automated CBE Web Ledger Scraper Verification.

SYSTEM ADMINISTRATOR DOCUMENTATION

Version 2.0 | July 2026

1. Introduction & Panel Access

Welcome to the VC Cake Academy Control Center. This dashboard is a private, administrative interface designed for administrators and management staff to run the school's operations, oversee courses, manage retail cake bookings, publish blog resources, and automate payment checks.

Securing & Accessing the Control Center

To access the admin panel, perform the following steps:

1. Open your web browser and navigate to the landing page.
2. Click the 'Admin Link' at the bottom of the footer, or go directly to the URL: /admin/login
3. Provide your secure username and password credentials on the login page.
4. Click the 'Login' button. Upon successful authentication, a JSON Web Token (JWT) will be generated and securely stored in your local storage, and you will be redirected to the dashboard (/admin/dashboard).

Control Center Navigation Structure

The panel uses a left-hand navigation sidebar layout to toggle between operations sections:

- **Course Registrations:** Reviewing prospective students, selecting shift timings, and checking ledger payments.
- **Celebration Cake Orders:** Overseeing consumer retail custom cake order forms, design inputs, and delivery logistics.
- **Vlogs & Blogs:** Creating and updating instructional material, vlogs (videos), and baking articles.
- **Hero Settings:** Bilingual text inputs modifying the main heading and cover photo of the academy's landing page.
- **User Inquiries:** Collecting submissions from the website contact inquiry form for manual callbacks.

2. Course Registrations Management

The Course Registrations tab lists individuals who have applied to enroll in VC Cake Academy. Students are admitted into one of the three primary shifts (Morning, Afternoon, Night) for the 1-month intensive course. Tuition is 2,500.00 ETB, payable via the Commercial Bank of Ethiopia (CBE).

Student Information Table Column Fields

- **Student Name:** FullName, email contact, and telephone number details.
- **Shift Details:** Selected shift session ('morning', 'afternoon', or 'night').
- **Reference ID:** The unique transaction reference code submitted by the student for CBE payment.
- **Amount Paid:** Expected amount (typically 2,500.00 ETB).
- **Status:** Current registration state: 'PENDING', 'APPROVED', or 'REJECTED'.

Registration Approval Lifecycle

When a student submits their enrollment form, the registration is set to 'PENDING'. The administrator must verify that the student has transferred the 2,500.00 ETB fee. You can approve registrations in two ways:

1. **AUTOMATED VERIFICATION:** Click the 'Verify via CBE Scraper' button to automatically run the payment verification crawler against the CBE Merchant Ledger (recommended).
2. **MANUAL APPROVAL:** If the scraper fails or the student paid via another method, click the green checkmark button ('Approve Payment Manually') to mark it as approved immediately.
3. **REJECTION:** If the transaction code is invalid, fake, or duplicate, click the red 'X' button to reject the application.

3. Celebration Cake Orders

The Celebration Cake Orders section lists custom cake requests made by consumers through the main website. Administrators must check cake specifications, flavors, weight requirements, and delivery dates to prepare orders for the bakery floor.

Cake Order Specifications & Workflow

- **Occasion & Flavor:** Cake theme type (e.g. Wedding, Birthday) and flavor profile (e.g. Chocolate, Red Velvet).
- **Weight & Layers:** Total weight in Kilograms (KG) and number of stacked layers requested.
- **Decoration Details:** A summary of decorations, text written on the cake, or custom design requests.
- **Delivery Date:** Target calendar date for pickup or dispatch.
- **Payment Details:** CBE reference number and total amount paid for the order.

Just like registrations, pending cake orders require verification. Use the 'Verify via CBE Scraper' button to automatically authenticate payment, or override it manually.

4. Blogs, Vlogs & Hero Settings

Vlogs & Blogs (Content Management System)

This module manages articles and videos on the main page. The site supports bilingual content in English and Amharic. When adding content, fill out titles and descriptions in both languages. For type 'Vlog', supply a YouTube embed link (e.g. <https://www.youtube.com/embed/...>) which will render inside an interactive iframe. For type 'Blog', supply an image URL.

Hero Settings (Cover Customizer)

The landing page cover features a full-screen poster. Administrators can edit the text and graphics dynamically. Update fields for Title, Subtitle, and CTA Button Text in both English and Amharic, and provide an Image URL for the primary showcase photo. Click 'Save' to apply the update instantly without writing code.

5. Automated CBE Payment Scraper Crawler

VC Cake Academy features an automated Commercial Bank of Ethiopia (CBE) ledger scanner to prevent human error and fraud.

How the Automated Crawler Works

1. The administrator clicks 'Verify via CBE Scraper' on a pending registration or order.
2. The system triggers a POST request to `/api/admin/verify-payment` containing the payment reference and expected amount.
3. The background crawler logs into the CBE Merchant Account Portal at `/cbe-bank-portal` and parses the transaction ledger.
4. It looks for a record matching the reference ID. If found, it checks if the transferred amount matches the expected tuition or cake payment.
5. If both match, it updates the record status to 'APPROVED' in the database and returns a success notification such as: 'Payment verified! Reference code matches ledger transaction.'
6. If the code is missing or details mismatch, it leaves the record pending and displays the error message, allowing the administrator to investigate.

Troubleshooting CBE Scraper Failures

If the scraper returns 'Crawler failed to find transaction' or 'Mismatch error', verify that:

- The student/customer typed the reference ID exactly as shown on the CBE mobile app slip.
- The amount transferred matches the required fee.
- The CBE Portal ledger is updated. If the transaction was done recently, wait a few minutes and try again.
- If you confirm payment in your bank app manually, use the Manual Approval button (green check) to approve.
